Preparation of sintered carbides. A. Petrdlik, V. Dulck, and J. Uchytil. *Silikaty* 2, 107-112 (1953).—Two procedures (A and B) for producing sintered tungsten carbide from the same starting materials (WO_3 , cobaltous formate, and C black) were compared. In A a coarser W and finer Co was used, the grinding (94% WC, 6% Co) was carried out dry (wet grinding in B), the powder was compacted under 2 tons/sq. cm. (0.25 tons/sq. cm. in B), baked for 33 min. at 600° and 33 min. at 840° (70 min. at 840° in B), heated more rapidly to the sintering temp., sintered 100 min. (35 min. in B), and cooled more rapidly to $1000-1200^\circ$ than in B. The hardness, flexing strength, d., elec. resistivity, and linear contraction of the products were compared. Wet grinding and sintering according to A improved all characteristics. The flexing strength was raised by high-pressure compacting. Use of coarse-grained WC and fine-grained Co raised the product d. The quality of tools made from the product rose with a decreasing elec. resistivity. The grain size of the product was detd. by that of the WC used, but the sintering procedure A led to finer grain. A statistical analysis of the effects of the variables and their mutual interactions was presented. H. Morawetz.

The yellow coloring of lithium fluoride crystals. J. Eckstein, M. Holas, J. Jindra, A. Uchytilová, and Z. Wacziarg (Mineral Research Inst., Turnov, Czechoslovakia). *Phys.* 10, 247-54 (1965) (in English).—The causes of the yellow coloring of LiF crystals are discussed. In agreement with some others, coloring is attributed to impurities. Selective absorption in the infrared region at 4.3μ is independent of this coloring. Anal. data are supplemented by crystal-growing expts. in which defined admixts. of heavy metals (such as Co, Mn, Fe, Cr, Ni, Pt, Cu) are added to the melt. The most intense coloring of the admixts. is produced by Mn. Expts. on the effect of Cu and Pt are not entirely conclusive. In vacuum, where producing impurities evap. easily from the melt until their concn. drops below the crit. limit required for coloring, in air this happens only if the charge is left in the melted state for a longer period (a 1-kg. charge was kept at 130° above the m.p. for 36 hrs.). Results are improved if a dried gas, for instance N₂, is bubbled through the melt. A colorless crystal can be obtained in this manner even without using a vacuum; the starting material, however, must be sufficiently pure. A new method was worked out for prepg. the salt by direct pptn. of LiCl and HF. Heavy metals are removed from the Li component by means of cupral and dithizone. The construction of a novel app. for the crystal-growing expts. in vacuum is described. cf. Deubner, *et al.*, *CA* 53, 12835d. 12 references. A. Krenschke

AUTHORS: Eckstein, Juraj, Uchytlová, Anna

TITLE: Purification of lithium chloride, lithium nitrate and ammonium fluoride

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 1, 1963, 346, abstract 1132 (Czechosl. patent 99820, June 15, 1961)

TEXT: The initial materials for preparing LiF, which is suitable for growing single crystals (LiCl , LiNO_3 , NH_4F) are purified by two-stage precipitation of the heavy-metal impurities. In the first stage, a group reagent is used for precipitation (thioacetamide, cupral, thionalide, or potassium ethyl xanthate). In the second stage, after separating the dithizonates, the residual impurities are bound by complexes, e.g., LiNO_3 of usual purity are dissolved in water until a concentrated solution is obtained with pH 3.5-4. To this solution, 3% aqueous solution of cupral is added in small portions at intervals of 30 min, followed by activated

Card 1/2

carbon, and then the mixture is filtered. To the transparent filtrate, 0.2% solution of dithizon in chloroform is added in the ratio of 2 parts by volume dithizon solution to 1000 parts by volume filtrate; the mixture is shaken vigorously. The complexes forming are extracted with small additions of CHCl_3 . These procedures are repeated until the heavy-metal reaction disappears completely. The solution obtained is introduced into a slight excess of HF (acid) which has been previously purified by isothermic distillation in a polyethylene vessel, or into NH_4F solution previously purified by the same method as the Li salt. The LiF precipitation is decanted in boiling water until the reaction with Cl^- (or NH_3) disappears. The filtered pure salt is vacuum dried at 180°C in a platinum or teflon vessel. [Abstracter's note: Complete translation.]

ABSTRACT: From March 17, to 20, 1959, the regular conference was held at the Moskovskiy institut inzhenerov zemleustroystva (Moscow Institute of Land Survey Engineers). The conference was attended by about 400 representatives of schools, scientific research institutes, and various production organizations. In the plenary assembly, the following papers were read: Professor S. A. Udachin, Corresponding Member of the VASKhNIL (All-Union Academy of Agricultural Sciences imeni V. I. Lenin), "Tasks of Land Survey and Land Survey Science in the Light of the Resolutions of the 21st Party Congress of the CPSS." A. T. Panfilov, Representative of the Ministerstvo sel'skogo khozyaystva SSSR (Ministry of Agriculture of the USSR), "Basic Problems of Land Survey in the USSR." Professor N. V. Bochkov "Problems of Registration and of the Investigation of Soils in the Kolkhoz." In the Land Survey Section, 10 papers were read. - In the Geodetic Section, the following papers were read:

PURPOSE: This handbook is intended for mining engineers and skilled personnel of the mining industry.

COVERAGE: Volume II of the handbook reviews various methods of underground mining and analyzes the basic principles underlying different types of ore mining operations. Parts I, VI, IX XI, and XV of this volume were written by L. Ya. Tarasov, Mining Engineer. L. Ye. Egel', Geological Engineer, also participated in writing Part I. Part II was written by A. M. Byhochkin, Candidate of Geological and Mining Sciences; Part III by D. N. Ogloblin, Professor, Doctor of Technical Sciences, and M. G. Papazov, Candidate of Technical Sciences; Parts IV, V, and X were written by R. P. Kaplunov, Professor, Doctor of Technical Sciences; Part VII by V. V. Nedin, Professor, Doctor of Technical Sciences, and by Sh. I. Ibrayev, Docent, Candidate of Technical Sciences; Part VIII by N. N. Polyakov, Docent, Candidate of Technical Sciences (deceased) and by M. B. Udalkin, Mining Engineer; Part IX by A. M. Alyamskiy, Docent, Candidate
